

STRAINSFORPAINS, INC. August 2020

Strainsforpains makes the medical cannabis decision easier; our app educates the medical specialist and dispensary, as well as the consumer, to the multiple strains that are available for specific pains or ailments. The company has also expanded its mission in incorporating the manufacturing and sale of CBD from hemp based oil, that we will manufacture at the Pennsylvania facility.

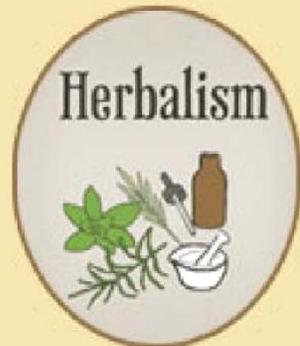

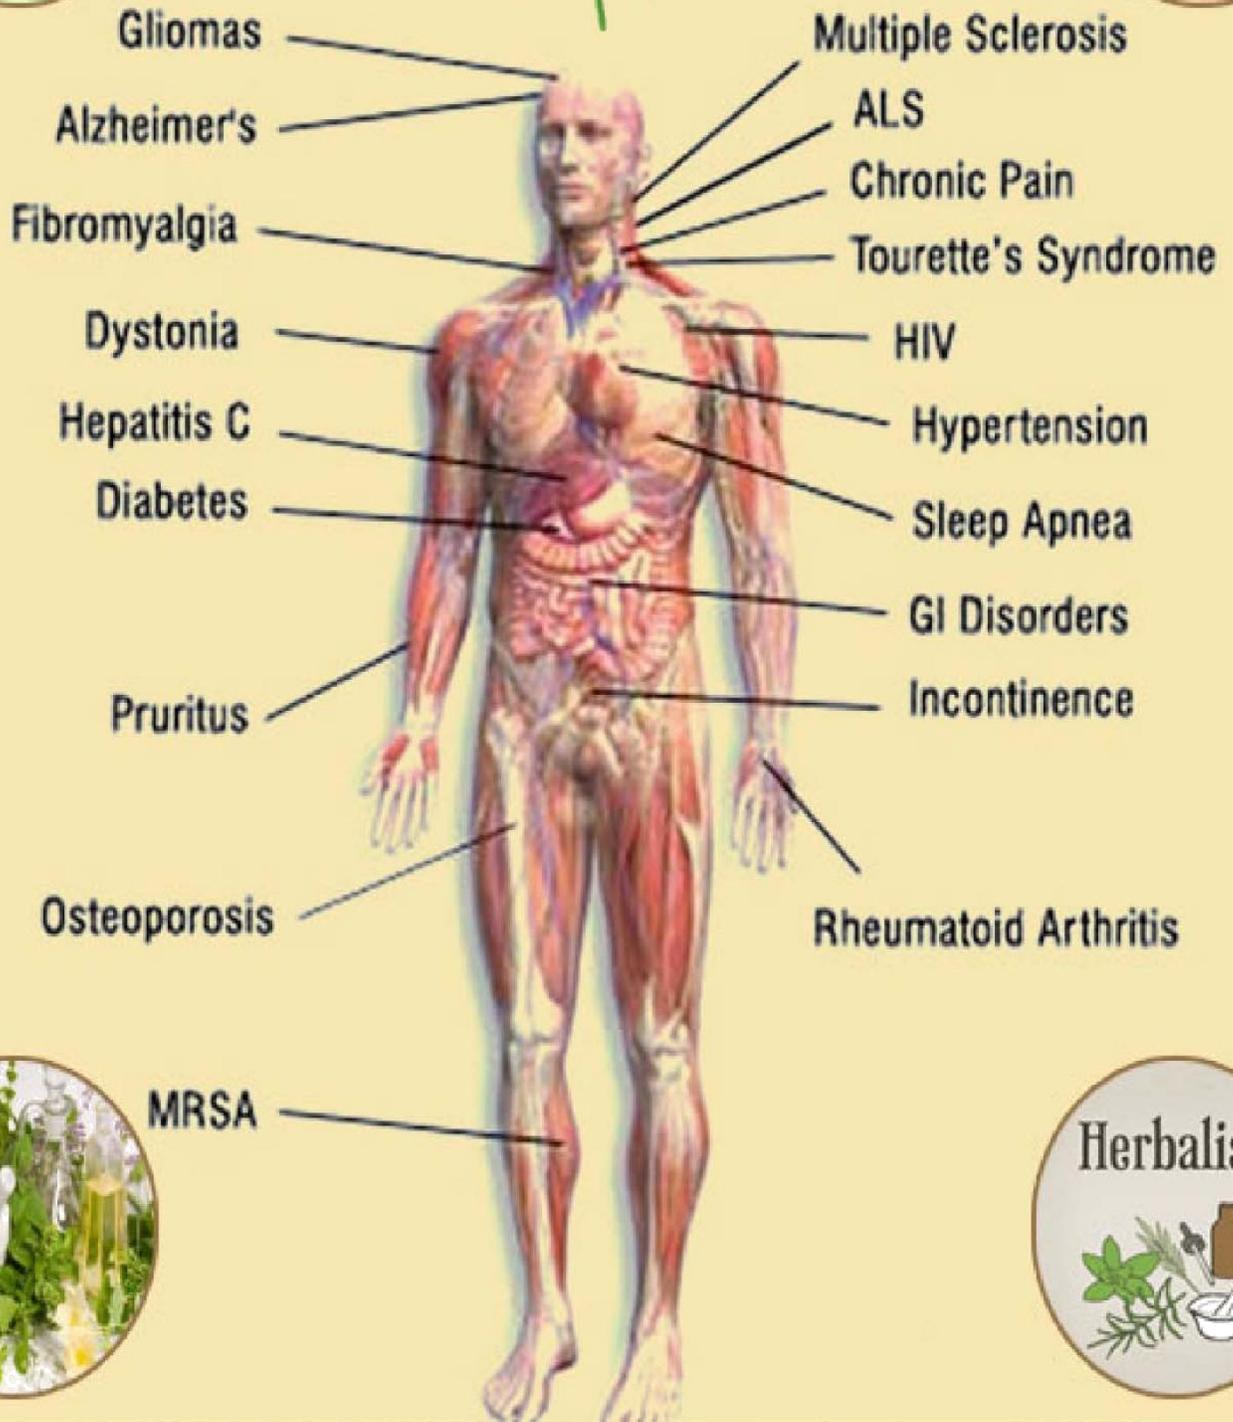

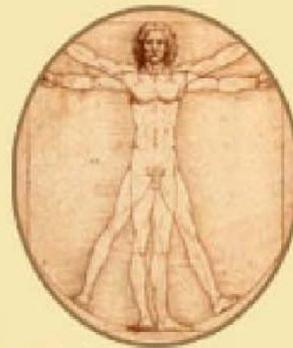

The Strainsforpains app is a user based recommendation application that scientifically helps determine which cannabis brand or strain is right for you, based upon personal data and strain genetics. The Strainsforpains tracker app, which was launched in December 2019, allows users to actively monitor and manage their personal pain from their ailments, as they are treated by medical marijuana, with over 100 ailments and 3000 brands and levels of effectiveness.

Our app helps determine which strains are most effective for you. The end users communicate advanced monitoring and management, allowing the app to track symptoms, treatments, impact, history, data and reports on all of the data collected. This allows dispensaries, growers, pharmaceutical companies, and researchers to share comprehensive reporting. Our continuous data is a key factor for the app and allows daily updates to patients and groups. We have analyzed thousands of clinical studies. The company showcased its app at the MJ Bizcon convention in Las Vegas, Nevada in December 2019. Telemedicine and telehealth is rapidly expanding, with the current Corona virus has only made the benefits of telehealth services more evident.

The company is publicly traded on the OTC market under the symbol "EBYH". The company has achieved positive revenues in fiscal year 2019.

"Our app will assist pain management professionals & dispensaries in making better choices for the consumer"

- Dr. B. Moorjani

Potential Therapeutic Uses of Medical Marijuana

Latest Info

Strainsforpains collaborating and sharing data with Mount Sinai Hospital physicians on pain management education. Data base considered to be up to 50,000 doctors. Strainsforpains collaborating with University of Vermont on company data. Company management to attend several medical cannabis shows in 2020-2021. Management will speak and present at certain events.

While the majority of States in the US continue to impose a total ban on cannabis, there are 33 states which allow its use for medical purposes, and according to the developers of this app the prohibition on medical cannabis "rapidly coming to a close". The global telehealth market is projected to reach \$55 billion in 2025 from \$25 billion in 2020, at a CAGR of 17%. Several small cities are looking to become 'hubs' for this industry. Other small cities have got out of debt by increasing their cannabis industrial base and workforce.

Strainsforpains has collaborated with major research facilities, like University of Vermont and New York Mount Sinai to further develop existing data sources and marketing. Company management has associated with State University of New York(SUNY) in residencies related to cannabis education. The Company has entered into its public company stage and has brought on board industry experts as consultants. Strainsforpains showcased it's app in a booth at the MJ BizCon Convention in Las Vegas in December 2019.

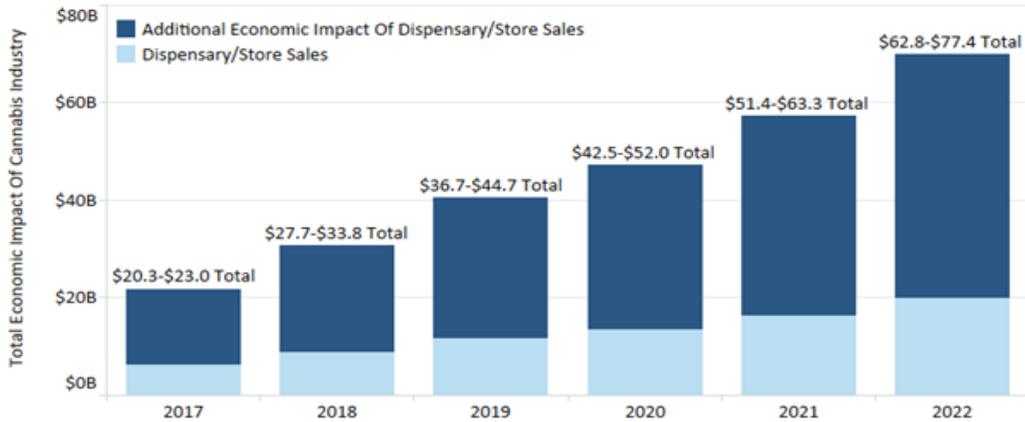

Our company has initiated 'focus groups' to help us better target audiences, consumers, medical professionals, industry players, and third party service providers. Some of these professionals have been successfully persuading the media, politics, and industry on the harmful effects of opioids. We feel that our cutting edge technology will be instrumental in the help of veterans who suffer from many diseases including PTSD. Our company is committed in the fight against opioids, and look to prevent many thousands of deaths occurring on an annual basis in the US alone.

Our research and data has resulted in an app, with hundreds of different strains available, each of which contains a combination of several cannabinoids of varying strengths. The complexity is increased when you consider that each strain reacts differently with your own unique combination of cannabinoid receptors to produce medical, psychological, and recreational effects on the human body.

Our APP is initially aimed at what the developers call 'canna businesses' - those businesses such as cultivators and dispensaries who make their money from the legalization of cannabis.

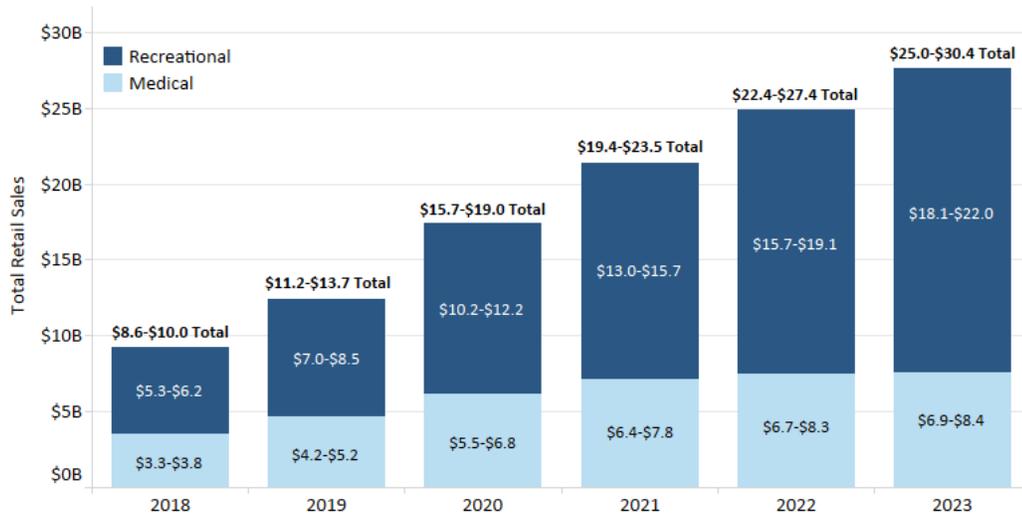

We also are retrofitting our Pennsylvania facility to manufacture and sell CBD products, extracted from hemp. the 2019 CBD market which is \$1 billion, can grow to \$20 billion by 2022. In 2017 it was approximately \$400 million, and in 2018 it was approximately \$680 million. The estimate of growth is 34% CAGR. The most growth will be seen in the health and wellness category, like nutraceuticals (\$6.4 billion) and topicals (\$4 billion.)
